Read Online Light Behaves Like Study Guide Physics

In physics, light is a type of electromagnetic radiation that is visible to the eye. Light has the unique property that it can be described in physics as both a wave and as a stream of particles called photons. On this page we will describe some of the behaviors of light as a wave including reflection, refraction, and diffraction.

Light has been described as a particle, as a wave, and even as a combination of the two. Light behaves like both, a wave and a particle. A photon is a unit of light. Low energy photons tend to behave more like waves and higher energy photons behave like particles. You will learn about the properties of light in this section.
