For creating reports using Power BI Desktop, see Desktop report view.

Create a report from a dataset - Power BI | Microsoft Docs

The next step is to combine the input/output columns and the weight columns. Each row knows whether it is an input or an output and having the values you want to compare in different columns will make the comparison harder. And then we add an "index" so that we can figure out what the first step and the last step for a particular cycle are.
