Monthly "all you can eat" subscription services are now mainstream for music, movies, and TV. Will they be as popular for e-books as well?

Pulsejet Engines

A pulsejet engine is a type of jet engine in which combustion occurs in pulses. A pulsejet engine can be made with few or no moving parts, and is capable of running statically. Pulsejet engines are a lightweight form of jet propulsion, but usually have a poor compression ratio, and hence give a low specific impulse. One notable line of research of pulsejet engines includes the pulse detonation engine, which involves repeated detonations in the engine, and which can potentially give high compress

Pulsejet - Wikipedia

A model pulsjet engine is basically made of a tube consisting of a head with a venturi shaped air-intake, a diffuser, a combustion chamber, reed valve plates, a spark plug and an exhaust. In order to start the engine, a compressed air from an external pump or air bottle is fed to the angled pipe located near the diffuser while a pulsed high voltage

Pulsejet Engines for Model Aircraft

A pulsejet engine is an air-breathing reaction engine that employs an ongoing sequence of discrete combustion events rather than one sustained combustion event. This clearly distinguishes it from other reaction engine types such as rockets , turbojets , and ramjets , which are all constant combustion devices.

Valveless pulsejet - Wikipedia

Unlike conventional Gas turbine engines, pulsejet engines are constant volume combustors and it has few or zero moving parts. No moving parts such as compressor blades required for compression this is happened naturally inside the CC (Combustion chamber) of a pulsejet engine.

Inside Pulsejet Engines : 4 Steps - Instructables

The pulsejet is the only jet engine combustor that shows a net pressure gain between the intake and the exhaust. All the others have to have their highest pressure created at the intake end of the

Pulse Jet Engine - Aardvark

A pulse jet engine is a jet engine to which the intake of air is intermittent (through valves), resulting in a pulsating thrust. It is a jet propulsion engine containing neither compressor nor turbine, equipped with valves in its front that open and shut and so create thrust intermittently, rather than continuously.
